Whitesbog Blueberry Plants

1926 Price List for Commercial Growers

62-57

PLANTS—For commercial plantings we furnish strong 2-year-old plants with tops 8 to 10 inches high and a good ball of roots. From plants this size we secure a profitable crop the third summer (a little over 2 years) after planting. The plants are pruned ready to plant before they are packed.

PRICE—\$600 a thousand plants (250 or more at the same rate) provided not more than one-fourth of the order consists of the variety Pioneer. If more than one-fourth is wanted in this variety, the excess will be charged at \$700 a thousand. This includes cost of packing and delivery to our shipping station, but does not include freight or express charges.

SELECTION OF VARIETIES—We have two acres or more planted to each of the varieties we are offering and advise others to order some plants of each variety. We suggest that a good selection is our Set No. "E," in which each 100 plants include:

- 25 Rubel
- 20 Harding
- 15 Grover
- 10 Sam
- 20 Pioneer
- 5 Cabot
- 5 Adams

On account of our small supply of plants, not more than 10 per cent. each of Adams and Cabot can be furnished on any order. We have so few plants of Katharine that none can be furnished at the commercial price. For description of each variety and prices in smaller lots see our retail price list.

ORDER EARLY—Blueberry plants are shipped with some soil on their roots and weigh about 2 pounds each when packed. It is therefore advisable to order early and have them shipped by freight while entirely dormant. After April first shipments should go by express except to nearby points.

OUR RESPONSIBILITY—We are rated in Dun's and your banker will investigate our responsibility. We are glad to refer you to the Farmers' Trust Company, Mount Holly, New Jersey.

GUARANTEE—We guarantee to furnish vigorous, healthy plants that will reach you in first-class condition. Our plants are all of named varieties and are packed so that you can keep each variety separate. We will replace, without charge, any plant that proves untrue to label.

WHEN TO PLANT—Plant early in the spring, the earlier the better, or if you live near our nursery and can secure plants by truck, September or October planting gives good results.

CARE OF PLANTS WHEN RECEIVED—If the plants reach you while still dormant, and before conditions are suitable for planting, they will keep in perfect condition for several weeks without unpacking if stored in a cool place where they will not dry out. Freezing will not hurt them, but frequent freezing and thawing should be avoided.

SEE BOOKLET—For a description of the methods used at Whitesbog and suggestions for growing Blueberries for profit, see our bulletin, "Commercial Culture of Whitesbog Blueberries."
